Total Freedom Server Information

Server Overview

Welcome to the information page for the Total Freedom Minecraft server; if you wish to read just the rules, skip to the rules section in red below. The Total Freedom server is a free form sandbox server. Here at Total Freedom, all players are given creative mode plus OPs privileges provided they abide by our rules. Unlike most multiplayer servers, we like to allow maximum freedom here, whether it's using world edit commands, plugin essentials commands, mods, or logging in without a paid/premium account.

The server is currently located at **tf.madgeekonline.com:28965** or **64.34.165.5:28965** and is running **CraftBukkit (1.0.0)**.

Server Administration

The server owner is MarkByron and all players are equal with ops and plugin privileges. However, regular players can be accorded admin status by positively contributing to the server. Positive contributions include making fantastic builds that get saved for use in our sandbox, providing excellent world maps, assisting the server owner in dealing with griefers, and/or cleaning up their messes (e.g. lava and water towers), assisting new players, keeping the server free of lag and so forth.

The senior admins are:

- Beamm
- daniel0410
- Gmason1
- Jonoserf
- Juultjee
- Madgeek1450
- MetalHunter
- miwojedk
- pigruler
- PressAforAlex
- Tidus46
- Tylerf99

The admins are:

a7xtreme123
Allan8292
batking
Calob0903
Cheeky_badger
chickenchaser123
ChocoNatorr
Chris41
Cooloscar
Copperbot10

TheTMC035
Timper
Whakahoa
Mocca

There are also console admins who can remotely start and restart the server plus remotely op, deop, and use other administrative commands. Presently the console admins are:

- beamm
- cordacc
- daniel0410
- jonoserf
- Juultjee
- Madgeek1450
- miwojedk
- pigruler
- PressAforAlex
- tedi
- tidus46
- tylerf99

Madgeek1450 has additional console privileges equal to the owner, and is also a developer who has designed unique plugins especially for us on the Total Freedom server. In order to be considered for console admin, you must be an admin, have the approval of the server owner, Madgeek1450, and at least one other console admin.

Admins should give OPs to all new members (anybody may OP another player) and instruct new players to read the rules and this website. They can also deop griefers (first choice) and temporarily ban persistent griefers. Admins may not deop, kick or ban other admins unless a griefer is posing with an admin or owner account name (based on the poser using a different IP than is usually used by the admin or owner). Admins will resolve any and all disputes between themselves without involving the server owner - failure to do so may result in removal of admin status. Admins may use an [Admin] nick title tag if they so wish provided they use their normal nick as listed above but must use their minecraft name when doing admin commands. Non-admins my not use the [Admin] tag. If you wish to be an admin, you must have

the recommendation of at least two other senior admins and you must have a Twitter account in order to communicate with the server owner. Do not discuss becoming an admin with the server owner unless asked by the owner or you have the recommendation of two other senior admins. The server owner decides which admins are accorded the senior designation but is primarily based on length and quality of service to the server.

There are also positions of master builders and helpers. The master builders are miwojedk, RackaRackAli, lejenbuilder, lonesnowwolf, chickenchaser123, and swimboy199, the and helpers are self-appointed - if you wish to be a helper, simply appoint yourself and use the [helper] tag.

You may contact the server owner via Twitter if you have any questions. See the bottom of this page for Twitter details.

Server Rules

No Griefing!

Do not grief the server. There are many way to do that, but the most common are to intentionally crash the server, lag the server, destroy or damage the spawn, destroy or damage other player's builds, erase warp points, PVP without agreement of other players, chat spamming, and so forth. Use your best judgement, and remember that other people are on here to have fun also.

While we do strive to give our users Total Freedom, there are some limitations that we have been forced to put in place to prevent the worst of griefing. We are sorry for these measures, and if you need help building something legitimate but can't because of these limitations, please contact an admin.

Do note that actions such as "nuking" (removing and placing blocks rapidly via a client side hack) or freecam building/destroying will be automaticlly detected and you will be removed from the server. Additionally, some blocks, when used with worldedit, are prohibited and will result in automatic de-opping for evaulation by an admin. You should get permission from an admin before using "high grief" potential blocks like water and lava.

No Impersonation

Do not pose as the server owner (markbyron) and do not pose as one of the other regular players that use Total Freedom. By posing, that means using a program such as MinecraftSP or otherwise changing your nick. Posing to change your title or to pose as somebody "famous" (like Notch) is okay provided you do not use it grief the server.

Respect Privacy

Respect the "Total Freedom" of other players. Do not be a pest or a nuisance to others, and respect their privacy. Do not "help" with builds if people do not want you to, and do not teleport someone without their permission. It is best to use **/tpahere** to request that someone to teleport to you, rather than forcefully teleporting them.

Adhere to Authority

Do not override the actions of the server owner (markbyron) or other admins. For example, if an admin de-ops a player for griefing, you may not re-op them without permission.

Consequences

Violation of these rules may result in a temporary de-op, temporary IP ban, or other disciplinary action. The length of a

ban will be determined by the server owner based on the severity of the violation.

If you feel you have been banned, muted, or had an administrative action applied to you unfairly, please contact the server owner via Twitter. See the bottom of this page for Twitter details.

Server Help

Saving and Loading Builds With WorldEdit

Due to the immense and immediate world changing capabilities of the plugins this server runs, and the influence of frequent griefing, the server is frequently reset and restored to a default saved map. Except as arranged with the server owner (markbyron), **all builds, experiments, and user inventories are temporary unless you save them using WorldEdit**.

To save your builds (i.e. create a WorldEdit schematic), first use the **//wand** tool to select the bounds of your build (i.e. the opposite corners of your build, see the WorldEdit Quickstart Guide for help.) Then, type **//copy** to place your build on the clipboard, and type **//save nameofbuild** to save your build (replacing **nameofbuild** with a unique name of your own).

To load a schematic back into the world, do **//load nameofbuild**, and then **//paste**.

WorldEdit Cautions

When using the WorldEdit plugin, avoid selecting a radius greater than 50 or an area greater than 25,000 blocks. Selecting overly large numbers will typically lag and crash

the server (which of course is a violation of the rules above). If you make a World Edit that accidentally causes destruction to the spawn or other player builds, you should immediately say **//undo**. While accidents can happen, be responsible, and if you're just learning WorldEdit, test the commands in remote part of the map far away from any other builds.

Getting OP'd

When you join the server, in order to use the full set of commands you must be "opped". Simply request an admin give you OP permissions. If you don’t yet have OPs, you are default to creative mode and may obtain any inventory item.

Vanilla Server

If the CraftBukkit (the software this server runs on) is broken due to a recent Minecraft software change, we will be forced to use the standard Minecraft server software. As the standard server software is extremely limited, we call it "vanilla" mode. In this mode, we’ll have to manually OP each player, which will allow each player to to use the **/give** command to supply themselves with inventory.

A limited set of commands work with the Vanilla server, for more information see Vanilla Server Commands.

Flatlands

This server features an additional flat-land building world which is very useful for building intricate creations. You can access this world by typing **/flatlands**, and you can get back to the main world by typing **/flatlands** again.

Nether and "The End"

You can use standard portals to access The End and the

Nether, or use the **/nether** and **/ender** commands.

Gamemodes

You are free to either use creative or survival mode on the server. For creative, type **/creative**. For survival, type **/survival**.

Other Plugins

As Minecraft is continually updated, there is no guarantee that the mods and plugins will continue to function or that the developers will fix them when Minecraft is updated. We'll do our best to update or replace mods and plugins as needed. If you have suggestions, please send a message to MarkByron.

If you create mods yourself or know of other mods that you'd like to see here, let MarkByron know!

Exclusive Commands!

This server runs a unique set of plugins, some of which were modified and created specifically for this server. Because of this, we have a few commands avaliable you wont see anywhere else:

- **/nicknyan**: Use this as a replacement to the **/nick** command to have a rainbowlicious display name!
- **/radar**: Prints the people nearby in your current world.
- Various additional admin commands, if you need them, ask a senior admin for help.
  You can always type **/help <command>** to get help for a specific server command.

External Resources

We frequently change and update the plugins that run on this server. You can see what is currently running by typing **/plugins**. If you are not familiar with the operation of a plugin, you are encouraged to look it up on Google and read its documentation in order to fully understand it. Below you will find resources to help you with our core set of plugins.
